

SAFE-DOCK® EMS

A Safe and Convenient Way to Transport Infants in an Ambulance

A safer alternative for transporting infants in an ambulance.

Inside a typical ambulance, there's no quick and safe way to secure a car seat or infant carrier.

The Safe-Dock® EMS is the latest in a 40+ year history of product innovation for infant and child safety restraints. It is crash tested and meets or exceeds safety & compliance standards. The Safe-Dock device can be installed before or after market, often by maintenance teams, depending on the ambulance configuration.

Four Different Mount Positions

Works with any Infant Carrier

Slide-on Mount Design

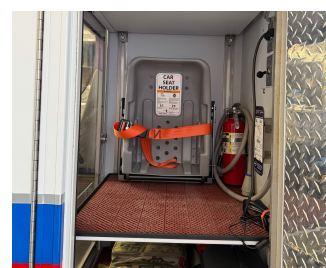

Side Configuration

Bottom Configuration

Compact Footprint

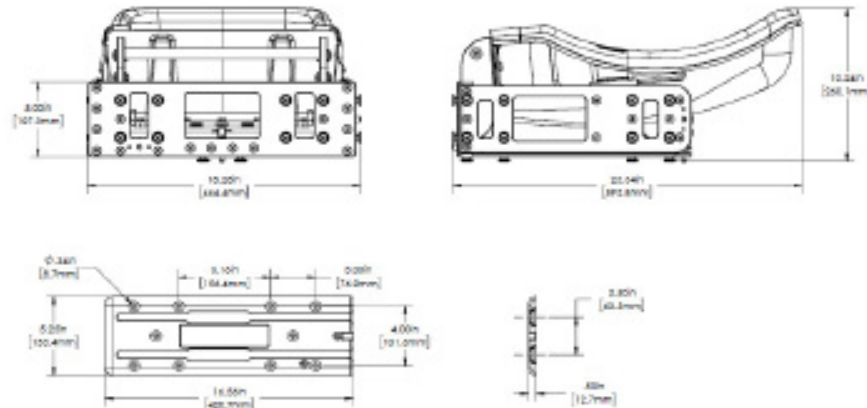

Features

- 1. SAE Crash Tested
- 2. Universal Infant Carrier Compatibility
- 3. Rapid Slide-On Deployment
- 4. Flexible Mounting Options
